Executive Summary

I have been working as a Full Stack Engineer at Money Forward, Inc. since July 2024, engaged in system development for accounting services. Previously, I worked at BuySell Technologies Co., Ltd. from April 2021 to February 2023 as a Full Stack Engineer, and from February 2023 to June 2024 as a Frontend Lead, focusing on system development for a suite of reuse platform products.

Work Experience

July 2024 - Present / Money Forward, Inc. (Full-time)

March 2026 - Present / New Development of Reconciliation Service

Overview

Item	Detail
Period	March 2026 - Present
Role	Backend Engineer (Tech Lead)
Team Size	8 - 10 members
Stack	Go (REST server), Kafka, CircleCI, AWS
Languages	English, Japanese

Responsibilities

- Backend/Infrastructure design and implementation
  - Technology selection
  - DB design
  - Setting up development infrastructure
  - Requirements gathering, specification design, and implementation of features
  - Improving Developer Experience (DX)
    - CI/CD setup
    - Local development environment setup
- Management as a Tech Lead
  - Task creation and assignment
  - Issue identification and prioritization
- Code Review
- Designing and improving development workflows, including branching strategies
- Refactoring

Key Achievements

- Led the technology selection, directory structure design, and coding rule establishment for the backend. Additionally, I work closely with PdMs and the business side to refine requirements, elaborate domain models, and adjust release scopes.
- As I collaborate with members in the Vietnam office, development is conducted almost entirely in English.

November 2024 - Present / New Development of Accounting Peripheral Systems

Overview

Item	Detail
Period	November 2024 - Present
Role	Full Stack Engineer
Team Size	8 - 15 members
Stack	React, TypeScript, React Router V7, Go (gRPC server), Kafka, CircleCI, AWS
Languages	English, Japanese

Responsibilities

- Design and implementation of Frontend/Backend/Infrastructure features
  - Technology selection
  - Setting up development infrastructure
  - Requirements gathering, specification design, and implementation of features
  - Improving Developer Experience (DX)
    - CI/CD setup and maintenance
    - Local development environment setup
- Management as a Sub-Manager
  - Task creation and assignment
  - Issue identification and prioritization
  - Leading Scrum events
- Code Review
- Designing and improving development workflows, including branching strategies
- Refactoring
- Performance Improvement
- Engineer Hiring (Interns)
- Training and support for Japanese members less familiar with English

Key Achievements

Led the technology selection, directory structure design, and coding rule establishment for both frontend and backend. Additionally, as several international members joined the team, I primarily facilitated team communication, including meetings, in English.

July 2024 - October 2024 / Revamp of Accounting Management System

Overview

Item	Detail
Period	July 2024 - October 2024

Item	Detail
Role	Full Stack Engineer
Team Size	7 members
Stack	React, TypeScript, JavaScript, Rollbar, Ruby on Rails, CircleCI, AWS
Languages	English, Japanese

Responsibilities

- Implementation of Frontend/Backend/Infrastructure features
  - Requirements gathering, specification design, and implementation of features
- Code Review
- Refactoring
- Performance Improvement
- Release Operations
- QA
- Designing and improving development workflows, including branching strategies
- Engineer Hiring (Mid-career)
- Training and support for Japanese members less familiar with English

Key Achievements

In a situation where requirements weren't fully defined but release was necessary, I communicated extensively with the Product Manager to clarify the vision, created prototypes to grasp the image, and revamped both frontend and backend to add features. Midway through, we adopted Scrum, allowing us to develop while gathering feedback from stakeholders outside the team. Also, since many members were not proficient in English, which was becoming a barrier as English became the official internal language, I provided support for their learning and participation in meetings.

April 2021 - June 2024 / BuySell Technologies Co., Ltd. (Full-time)

February 2023 - June 2024 / New Development & Operation of Inventory Management System

Overview

Item	Detail
Period	February 2023 - June 2024
Role	Frontend Lead
Team Size	7 - 10 members (Frontend team: 2 - 4 members)

Item	Detail
Stack	React, TypeScript, Vite, Next.js (Pages Router), Material UI, TanStack Query, Sentry, Open API, GitHub Actions, GCP (Cloud Storage)
Languages	Japanese

Responsibilities

- Leading development and operation with a focus on Frontend
  - Technology selection
  - Setting up development infrastructure
  - Requirements gathering, specification design, and implementation of features
  - Task creation and assignment
  - Code Review
  - Release Operations
  - QA
  - Improving Developer Experience (DX)
    - CI/CD setup
    - Local development environment setup
  - Incident Response (On-call)
  - Issue identification and prioritization
  - Refactoring
  - Designing and improving development workflows, including branching strategies
  - Performance Improvement
  - Monitoring and Alerting setup
- Member Education
- Engineer Hiring (New grads, Mid-career, Contractors)
- External Outreach
  - Frontend Design from the Perspective of Not Exhausting Developer's Brain Resources

Key Achievements

We needed to go from requirements definition to release in about half a year from scratch. Simultaneously, we needed to quickly show working screens to domain experts within the team and actual users to get feedback and iterate. In this context, to ensure codebase maintainability and minimize bugs, I incorporated VRT, Linters, and Formatters into CI/CD, created commands to generate file templates for page creation with a single command, and designed a directory structure that developers wouldn't get lost in (combining Atomic Design and Screaming Architecture). As a result, we were able to release in about half a year, and even now in operation, we can quickly make corrections based on feedback.

November 2022 - Current / Operation of Frontend Cross-Functional Organization

Overview

Item	Detail
Period	November 2022 - Current (at the time)
Role	Frontend Engineer
Team Size	4 - 8 members
Stack	React, TypeScript, Next.js (Pages Router), Material UI
Languages	Japanese

Responsibilities

- Planning and creation of frontend curriculum for prospective intern employees
- Planning and creation of company-wide frontend guidelines
- Planning and running frontend cross-functional meetings
  - Sharing knowledge on trying out modern libraries
  - Solving frontend issues in products
  - Sharing information about library vulnerabilities

Key Achievements

Although there was a company-wide policy to unify the future frontend tech stack with React, the curriculum for prospective interns only covered Ruby on Rails. Catching up on frontend skills until assignment to a product team was left to individuals or the product team's frontend engineers. In response, I planned and created a curriculum to build a TODO app using React, TypeScript, Next.js, and React Hook Form. By having prospective interns complete this curriculum first, we were able to raise their skills to roughly the basic level required by product teams. Furthermore, by creating model implementations alongside the curriculum, engineers reviewing the code (usually engineers from the assigned product team) could encourage feedback without hesitation.

October 2022 - February 2023 / New Development & Operation of Professional Appraisal Management System

Overview

Item	Detail
Period	October 2022 - February 2023
Role	Full Stack Engineer
Team Size	4 - 7 members

Item	Detail
Stack	React, TypeScript, Next.js (Pages Router), Material UI, Go, Hasura GraphQL Engine, GCP (Cloud Run, Cloud SQL)
Languages	Japanese

Responsibilities

- Frontend Design and Implementation
  - Screen design, UI/UX, and feature implementation
  - Improving Developer Experience (DX)
    - CI/CD setup
    - Local development environment setup
- Backend Design and Implementation
  - DB/API specification gathering, design, and implementation
- Management as a Sub-Manager
  - Task creation and assignment
  - Issue identification and prioritization
  - Leading Scrum events
  - Regular 1-on-1s with members
- Code Review
- Release Operations
- QA
- Incident Response (On-call)
- Refactoring
- Performance Improvement
- Monitoring and Alerting setup
- Member Education

Key Achievements

The project had been partially developed but not released, and most initial engineers had left. I took over the product from another team, so technical debt and lack of documentation were prominent. Therefore, for frontend, backend, and infrastructure, I established rough coding rules to unify the style of future code and led the refactoring of debt-ridden code in parallel. This enabled improved development speed for existing members and smoother onboarding for new members. Also, by establishing ADR writing as a culture, the rationale and overview of implementation started to be documented for major feature implementations.

June 2022 - February 2023 / Planning & Operation of Development Camp

Overview

Item	Detail
Period	June 2022 - February 2023
Role	Development Camp Working Group Leader
Team Size	4 members
Stack	Atlassian Confluence
Languages	Japanese

Responsibilities

- Leading the planning and operation of the development camp
  - Maintained roadmap to the event and daily tasks
  - Gave instructions as the general director on the day
- External Outreach
  - Recommendation for Running a Development Camp - From Planning to Execution of the First Development Camp

Key Achievements

BuySell Technologies had never held a development camp before, and there was no internal knowledge. As a leader, referring to examples from other companies and through discussions with operation members, I clarified what the camp should look like. There were mountains of things to decide, such as purpose, budget, participants, schedule, etc., and we had to proceed in parallel with product development. It was tough, but through frequent surveys to applicants and hearings with the CTO and department heads, we aligned the direction and successfully managed the event day. As a result, 76% of participants answered with a satisfaction level of 4 or higher (out of 5), and 89% answered they would like to participate again. Based on this survey result, the next camp has been confirmed.

May 2022 - October 2022 / New Development of Store Purchase Management System

Overview

Item	Detail
Period	May 2022 - October 2022
Role	Full Stack Engineer
Team Size	12 members
Stack	React, TypeScript, Next.js (Pages Router), Material UI, Go, Hasura GraphQL Engine, GCP (Cloud Run, Cloud SQL)

Item	Detail
Languages	Japanese

Responsibilities

- Frontend Design and Implementation
  - Screen design, UI/UX, and feature implementation
- Backend Design and Implementation
  - DB/API specification gathering, design, and implementation
- Code Review
- QA
- Refactoring
- Monitoring and Alerting setup
  - Sentry
- Member Education

July 2021 - May 2022 / New Development & Operation of Product Master Management System

Overview

Item	Detail
Period	July 2021 - May 2022
Role	Full Stack Engineer
Position	Member
Team Size	5 - 8 members
Stack	React, TypeScript, Next.js (Pages Router), Material UI, Go, Hasura GraphQL Engine, GCP (Cloud Storage, Cloud Run, Cloud SQL, Cloud Function, Cloud Monitoring)
Languages	Japanese

Responsibilities

- Frontend Design and Implementation
  - Technology selection
  - Setting up development infrastructure
  - Screen design, UI/UX, and feature implementation
- Backend Design and Implementation
  - DB/API specification gathering, design, and implementation
  - Error handling mechanism design and implementation

- Code Review
- QA
- Incident Response (On-call)
- Refactoring
- Monitoring and Alerting setup
  - Datadog
  - Sentry
  - Cloud Monitoring
- Member Education
- External Outreach
  - Displaying Go custom errors with stack trace in Sentry
  - Introduction of infrastructure monitoring tools to a new project

April 2021 - June 2021 / Maintenance & Operation of Core Second-hand Purchase System

Overview

Item	Detail
Period	April 2021 - June 2021
Role	Full Stack Engineer
Team Size	10 members
Stack	Vue, Ruby on Rails
Languages	Japanese

Responsibilities

- Frontend/Backend Design and Implementation
- Code Review
- QA

April 2021 - June 2021 / Maintenance & Operation of ToC Purchase App

Overview

Item	Detail
Period	April 2021 - June 2021
Role	Full Stack Engineer
Team Size	2 members

Item	Detail
Stack	Ruby on Rails, GCP (Kubernetes Engine)
Languages	Japanese

Responsibilities

- Backend Design and Implementation
- Code Review
- QA
- Data Correction
- Infrastructure Maintenance

June 2020 - March 2021 / BuySell Technologies Co., Ltd. (Part-time)

June 2020 - March 2021 / Maintenance & Operation of ToC Purchase App

Overview

Item	Detail
Period	June 2020 - March 2021
Role	Full Stack Engineer
Team Size	10 members
Stack	Vue, Vuex, JavaScript, TypeScript, Next.js (Pages Router), Ruby on Rails, GCP (Kubernetes Engine)
Languages	Japanese

Responsibilities

- Frontend/Backend Design and Implementation
- Code Review
- QA
- Refactoring
- Data Correction

September 2019 - February 2020 / Link Edge Inc. (Internship)

New Development of Affiliate Advertising Platform (September 2019 - February 2020)

Overview

Item	Detail
Period	September 2019 - February 2020
Role	Full Stack Engineer
Team Size	4 members
Stack	Ruby on Rails, jQuery
Languages	Japanese

Responsibilities

- Implementation of Frontend/Backend features
- Code Review

Key Strengths

I am highly conscious of maintaining high product quality while rapidly conducting team development.

In development, I implement the following measures:

- Incorporating Linters and Formatters packed with plugins and custom rules into CI.
- Making sure to write unit tests basically and incorporating them into CI.
- Enabling the generation of necessary file groups for development with a single command.
- Establishing coding guides through discussion with members and adopting a policy of generally not reviewing code that does not follow the guide.

As a result, even newly joined interns can immediately write code that follows the rules, and the review effort for their PRs has been kept to about 5-10 minutes each time.

Extracurricular Activities

OSS Activities

I contribute to several OSS projects out of a desire to contribute to the community, technical interest, and to interact with engineers around the world.

OSS Activity Link: https://github.com/pulls?q=author%3Akazizi55+archived%3Afalse+-org%3Akazizi55+

- Valibot
  - Bug fixes such as email method
  - Expansion of documentation

- TypeScript ESLint
  - Worked on issues labeled Good First Issue
    - Bug fixes
    - Test expansion
  - Output
    - Recommendation for OSS Commits - Utilizing TypeScript ESLint as a Case Study

Speaking

- Scrum Fest Kanazawa 2025
  - Building Common Understanding with "Concrete Artifacts": Optimization of Communication in Dev Teams
- 【GENDA x ZEST x BuySell】Frontend Study Session
  - Post Zod - Introduction to Valibot

Skills

Programming

*Based on practical experience

Years of Experience	Skill
0-1 Years	Vue, Python
1-2 Years	Ruby on Rails, GraphQL
2-3 Years	GCP, Terraform, Next.js, PostgreSQL
5 Years	TypeScript, JavaScript, React, Go

Notes

- Hold Google Cloud Professional Cloud Architect certification (Certificate)

Business

- Bookkeeping Level 3 (Nissho Boki)

Languages

Language	Level	Certification	Year
Japanese	Native		
English	Business (Work Experience)	TOEIC 855 (Certificate)	2024

Education

Date	Education
Mar 2016	Graduated from Tochigi Prefectural Ishibashi High School
Apr 2016 - Mar 2021	Graduated from Sophia University, Faculty of Global Studies (Bachelor of International Relations)
Jun 2024 - Jun 2026	Graduated from University of the People, Computer Science

Personality

ENFJ / Protagonist

> Protagonists are inspiring optimists, readily taking action to do what they feel is right. They take great pride and joy in guiding friends and loved ones to become their best selves.
